Omada Controller

- Installation
- Wireguard omada setup

Installation

How to configure WireGuard VPN on Omada Router in Standalone mode?

Which ports do Omada SDN Controller and Omada Discovery Utility use? (above Controller 5.0.15)

How to install the Omada Controller on the Linux system

How to Configure Omada Controller as a Windows Service(above Controller 2.5.4)

How to Configure Omada Controller as a Windows Service(above Controller 4.1.5)

EAP Disconnected

It's working now - fingers x'd:

First problem appears to be the start.bat file:

java -XX:MaxHeapFreeRatio=60 ... -cp "%~dp0..\lib*" com.tplink.omada.start.OmadaMain start

Added a w to java... forcing it to use the "non-window" or "console" java run time

javaw -XX:MaxHeapFreeRatio=60 ... -cp "%~dp0..\lib*" com.tplink.omada.start.OmadaMain start

Then I added an entry to the "path" environment variable:

C:\Program Files\Java\jre1.8.0_301\bin\

Pointing it to the 64bit java run time

Lastly, I moved the new entry for "path" to the top - so it finds that first - hopefully I won't have broken anything else by doing that.

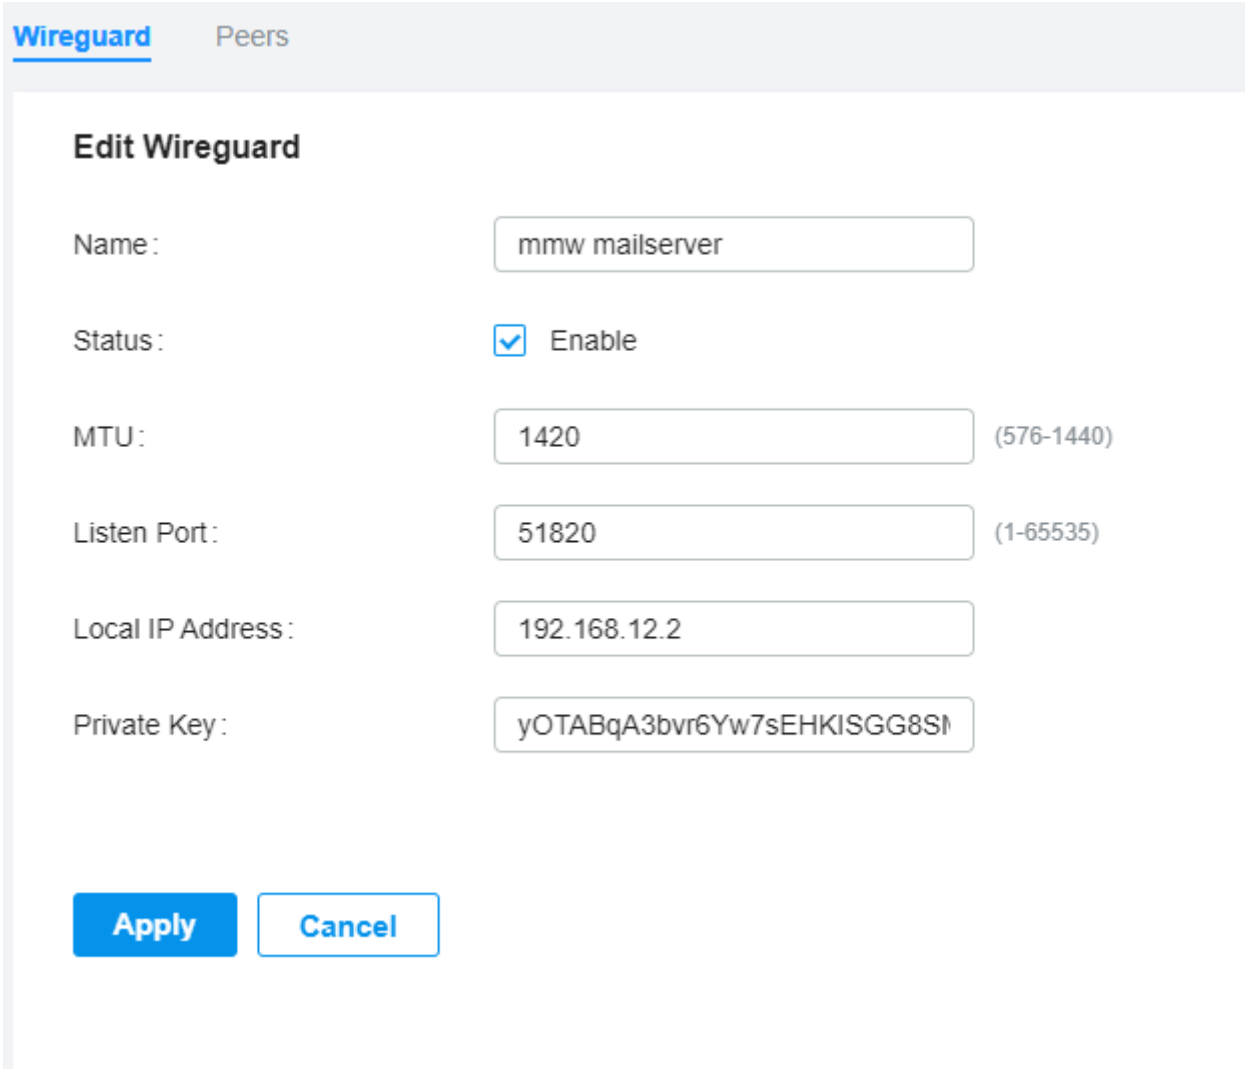

Checked it restarts and rediscovers normally

Checked it restarts and rediscovers when power is switched off and back on

Thanks for your help

Wireguard omada setup

Setting up wiregurad on TP link omada router
